Supplementary File S4. Case-Level Independent and Consensus Scoring Matrix

Description. This supplementary file presents the case-level scoring dataset for 300 model-case-input-condition evaluations (50 cases x 3 platforms x 2 input modes). For each evaluation, the file reports the independent pre-consensus ratings of the dermatologist and emergency medicine specialist and the final consensus rating. The diagnostic metric previously labelled Top-4 has been renamed cumulative Top-4 to reflect the most likely diagnosis plus three ranked differential diagnoses requested in the standardized prompt.

Coding. Binary outcomes are coded as 1 = present/correct/appropriate and 0 = absent/incorrect/inappropriate, according to the relevant outcome definition.

Table S4-1. Inter-assessor agreement and consensus counts by platform, input mode, and outcome

Model	Input mode	Outcome	Dermatologist positive n	Emergency physician positive n	Consensus positive n	Initial disagreements n	Cohen kappa initial scores
ChatGPT	Text-only	Top-1	23	24	23	3	0.880
